SPAM Filtering

www.acp.us.com
Why Email Spam Filters Are Important

Keeping your email protected from spam and viruses is vital for keeping your business running smoothly. While most people see spam as a time consuming nuisance, it can be more dangerous than that. Spam can contain viruses and malware that can damage your IT infrastructure and cause systems failure. At ACP Technologies, we offer email spam filters. We believe in keeping your IT infrastructure protected with the most advanced anti-spam solutions available. You shouldn’t have to spend valuable time filtering for spam to try and figure out if an email is legitimate or not. Have your email spam filters completed for you, so you can focus on maximizing your company’s productivity.

Affordable Spam Firewall Options

Our spam filter is an affordable option for companies looking to rid their inboxes of spam that could potentially carry viruses or malware. We don’t use per-user fees, which allows companies to quickly scale up their usage as their business expands.

Get Quicker Response to Threats

Spam is rapidly changing as hackers and spammers develop new techniques to get around firewalls. Spammers are always trying to find a way into your network, causing serious damage if they succeed, and putting your systems down for a significant amount of time. Our team is
constantly analyzing new data from across the web to quickly discover new types of spam and online threats. We are able to identify new threats quickly, providing one of a kind protection for your business.

Comprehensive Filters and Long-Term Protection

The internet is always growing, changing, and adapting to new conditions. It is important to have comprehensive filters and long term protection to meet the demands of the internet’s constant evolution. With our anti-spam solution, you’ll get multiple services under one umbrella. Our anti-spam firewall includes data protection, virus blocking, DoS prevention, email continuity, and policy management to bring a complete solution for filtering spam emails. When new technical requirements arise, we automatically updates our software’s capabilities, keeping your business completely protected.
